Loan agreement

Fictional test data. Non-operative specimen. Not for signature.

Bluefen Digital Systems (Demo) Ltd.

PRINCIPAL / USD	FIXED ANNUAL RATE	LOAN TERM
\$6,500,000	7.05%	60 months

01 Parties and borrower profile

Lender	Demo Harbor Lending Corporation (fictional)
Lender address	101 Example Finance Way, Demo Capital, Fictional Territory
Borrower	Bluefen Digital Systems (Demo) Ltd. (fictional)
Borrower address	128 Example Enterprise Road, Demo District, Fictional Territory
Profile / legal form	380 employees; annual revenue \$72,000,000. Private limited company. All profile figures are invented.
Agreement / funding date	15 Sep 2026

02 Commercial terms

Permitted purpose	Fund enterprise software expansion and international sales operations.
Facility	Single-draw, fixed-rate, fully amortizing term loan in USD. No redraw.
Repayment frequency	20 quarterly installments; interest and principal each period.
Regular installment	\$388,466.16 for installments 1 through 19.
Final installment	\$388,466.26; adjusted only for cent rounding.
First payment / maturity	15 Dec 2026 / 15 Sep 2031
Scheduled interest total	\$1,269,323.30
Scheduled repayment total	\$7,769,323.30 including principal and interest.
Fees / early repayment	No origination, service, late or prepayment fees. See clause 4.

Security, customer conditions and unsigned execution blocks appear on page 3. Annex A contains every scheduled payment. Totals assume timely payments and no prepayment.

MIDSIZE BUSINESS / CUSTOMER 28 OF 40

Terms and conditions

These specimen clauses accompany the commercial terms on page 1.

1. Commitment and funding. The lender is modeled as advancing \$6,500,000.00 in one payment on 15 Sep 2026. The borrower uses the advance only for the purpose stated on page 1. The model assumes all draw conditions are satisfied on that date. Repaid amounts cannot be borrowed again.

2. Interest calculation. The nominal annual interest rate is fixed at 7.05%. Each period, interest equals the opening principal balance multiplied by the annual rate divided by 4 for quarterly payments. Interest is rounded to USD cents using half-up rounding. The model uses equal periods, not actual day counts. Overdue interest does not compound and no default-rate increase is modeled.

3. Scheduled payment obligations. The borrower makes quarterly payments in the amounts and on the dates in Annex A. Payments apply first to the current scheduled interest, then to principal. The final installment clears the remaining principal and period interest. Due dates are used as printed without weekend or holiday adjustments. Annex A assumes no missed payments.

4. Fees and voluntary prepayment. No origination, servicing, late-payment, commitment or prepayment fee is included. The borrower may prepay on a scheduled due date after paying that date's scheduled installment. Any additional amount then reduces principal. Future interest applies only to the reduced balance; a revised schedule is required. No off-cycle prepayment calculation is modeled.

5. Information and undertakings. The borrower is modeled as having capacity or entity authorization, providing complete and accurate transaction information, and complying with the stated purpose. The borrower supplies the reporting listed on page 3, keeps contact details current, and promptly notifies the lender of material events that affect repayment or described collateral.

6. Default and cure. A payment default is modeled when a scheduled payment remains unpaid for 15 calendar days after its due date. A remediable breach of an obligation other than payment has a 30-calendar-day cure period after written notice. Material fraud, a knowingly false material statement, or formal insolvency is an immediate default in this specimen. A waiver must be in writing.

7. Modeled remedies. After an uncured default, the lender may issue written notice requesting immediate repayment of outstanding principal and unpaid scheduled interest. Collateral remedies would require separately valid security documents and applicable legal authority. This specimen creates neither. No collection costs, penalty interest, or interest after acceleration are calculated in this dataset.

8. Transfer and confidentiality. Either party needs the other party's written consent to transfer this modeled agreement. Transaction information is treated as confidential, except for disclosures to professional advisers, service providers under confidentiality duties, or disclosures required by applicable law. No actual personal or account information is included in this document.

9. Notices, changes and document order. Modeled notices go to the addresses or reserved-domain emails on pages 1 and 3. Amendments and waivers require written agreement. The commercial terms govern a general wording conflict; Annex A states payment amounts and dates. This document and its annex form one specimen. No external terms or missing attachments are incorporated.

10. Specimen status and jurisdiction. This is a fictional, non-operative sample for demonstration, training and document testing. It does not evidence a real debt, a funding commitment, a signature or a security interest. Governing law and dispute forum are intentionally not designated. No jurisdiction-specific consumer, mortgage, corporate or disclosure provisions have been selected.

MIDSIZE BUSINESS / CUSTOMER 28 OF 40

Customer conditions

Borrower-specific provisions, notices and illustrative execution blocks.

Purpose and draw conditions

Modeled conditions are board authorization, a capital expenditure budget and a project implementation plan. The borrower provides a sources-and-uses summary and records financed assets. These conditions are assumed satisfied only to produce the synthetic repayment schedule.

Business reporting and financial covenant

Provide quarterly management accounts within 45 days after each calendar quarter, annual accounts within 120 days after year-end and quarterly project updates. Starting with the first calendar quarter-end at least 12 months after funding, maintain debt service coverage of at least 1.20x, tested quarterly on a trailing 12-month basis.

Coverage definition. Debt service coverage equals cash generated from operations before debt-service payments divided by all scheduled interest and principal payments for the same period, including other loans. Use borrower-only figures for a midsize business and consolidated group figures for a corporation. If scheduled debt service is zero, the test is not applicable. No actual covenant result is asserted.

Security and guarantees

Modeled collateral: None. Unsecured business expansion term loan.

Maintain and reasonably insure any described financed equipment or property. Any real security would need a separate signed instrument, asset verification and the required legal formalities. The sample asset references above are descriptive identifiers, not incorporated attachments. No third-party guarantee, personal guarantee, lien priority or existing security is assumed.

Notice contacts

Lender contact	Avery Quinn, Sample Credit Officer servicing@demo-harbor.example
Borrower contact	Zara Linden, Chief financial officer customer028@borrowers.example

All people and contact details are fictional. The .example addresses are reserved-domain demonstration contacts, not functioning payment or notice instructions.

Illustrative execution blocks

Deliberately unsigned. These blocks demonstrate where a real agreement would record authorized signatures; they do not indicate execution or acceptance.
